

92973868

NOTE: This Add-on kit allows you to run original 1978-79 pulse wipers with your new 510963 ('78) or 510968 ('79) Classic Update wiring kit. This complete Plug-N-Play assembly requires no cutting or other modifications to install. Simply follow the installation instructions on this page. This kit is intended for use on all 1978-79 Firebird applications with a factory pulse wiper system, but is NOT intended for use to add pulse wipers to a vehicle, as there are switches, delay boards and other necessary items not included in this kit.

Plug this bare terminal into the Accessory connector found on page 5 with details found on page #7, of the 92972778 or 92971802 main instruction sets. This wire must mate up to the "orange" 12v battery wire in that connection. In the event that you need an additional 12v battery feed, use the terminals provided in the main dash kit, and plug that wire into the 12v "Battery Feed Pigtail" above.
