

# USE THIS SHEET FOR HIGHWAY 15 WIRING KIT

## INSTALLATION INSTRUCTIONS:

WIRE COLOR	CIRCUIT
DARK GREEN	HORN
TAN	RADIO
ORANGE	HEAT/AIR
WHITE	WIPER FEED

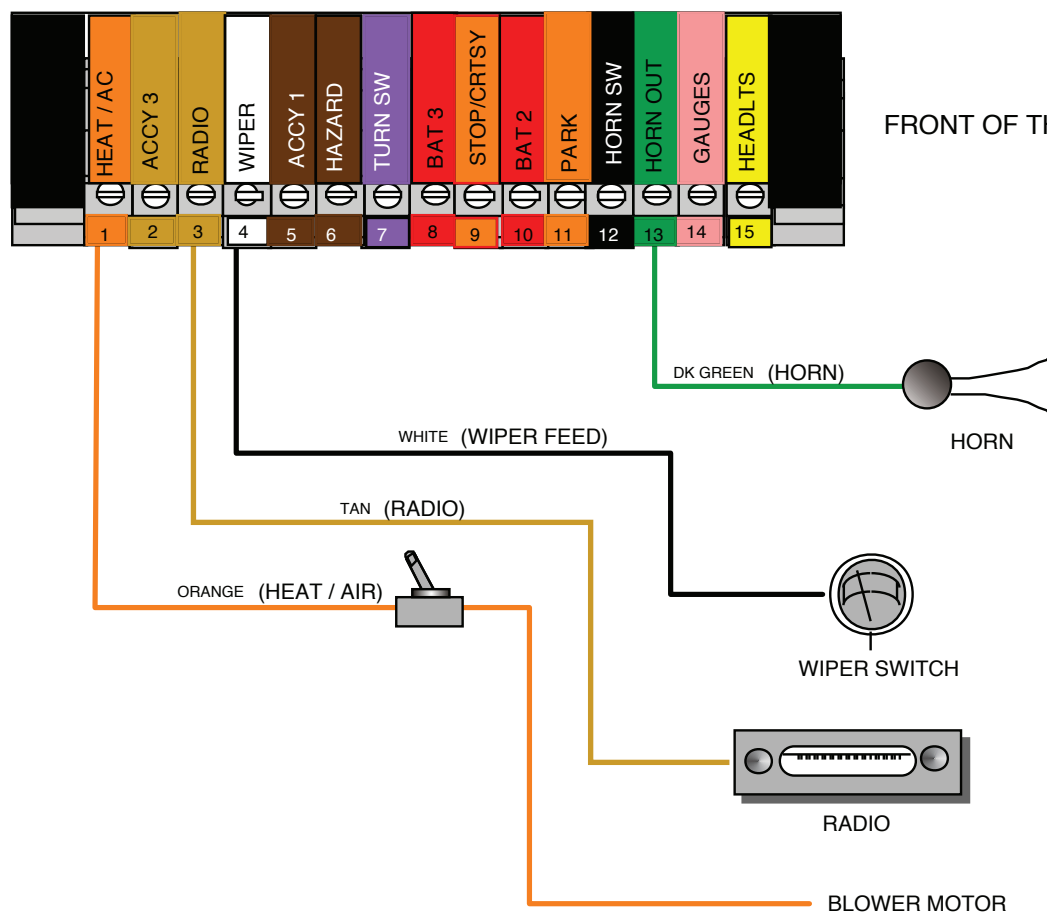

## INSTALLATION

Connect this dark green wire to the "HORN OUT" location on the front of the panel. Route the other end of this dark green wire to your horn and connect it there.

Connect this tan wire to the "RADIO" location on the front of the panel. Route the other end of this tan wire to your radio "on/off" circuit and connect it there. This is the "on/off" power feed for your radio. If you have a digital radio that has a memory function, that will need to be connected to a fused battery feed which has not been provided in this kit.

Connect this orange wire to the "HEAT / AC" location on the front of the panel. Route the other end of this orange wire to your heater / ac switch and connect it there. This is the accessory "on/off" power feed for the heater / ac switch and blower motor.

Connect this white wire to the "WIPER" location on the front of the panel. Route the other end of this white wire to your wiper switch or motor, and connect it there. This is the accessory "on/off" power feed for the wiper and washer switch / motor. Be aware that this is a 12-volt fused feed wire. See the wiper manufacturers instructions before making any connections.
