double wire crimps.
p/n **500523**.....\$89.95

.8 pounds lighter than a stock headlight bulb !

DOT approved !

INSTALLATION INSTRUCTIONS

This kit is designed to be installed in a 1956-57 Corvette which has the OEM style wiring existing in the vehicle.

1- Remove existing headlight bezel, retaining ring, and bulb. Disconnect headlight connector.

2- Position the original headlight backing retainer on the new headlight and align the slots with the locating tabs molded into the new housing.

3- Install original headlight retaining ring from front of assembly. Be sure retaining ring index tabs match slots in headlight backing retainer.

4- Install protective foam pad into the headlight bucket area. Plug wire assembly into bulb. Route wires through bucket hole, and set grommet.

4- Secure new assembly into headlight bucket.

5- Make final connection to stock connector on inner fender. Be sure to maintain color continuity with green (hi beam) tan (low beam) and black (ground).
